Skills

A software engineer (web) with hands-on experience implementing UI mockups and building and consuming REST APIs. I primarily work with JavaScript, on the frontend with Reactjs and on the backend with ExpressJS. I also possess SQL and NoSQL experience with PostgreSQL and MongoDB respectively.

I have built various production scale and also side projects leveraging tools like ReactJS, NextJS, ExpressJS, NodeJS, MongoDB, Firebase, PostgreSQL, TailwindCSS, Chakra-UI, Netlify (Serverless functions included), Heroku, MailChimp.

Experience

February 2021

Renager Limited, Remote (Nigeria) - Frontend Engineer (Intern)

- I was responsible for building the landing page, being the first point of contact with prospective clients I ensured a pixel perfect implementation.
- I built it with NextJs and styling with Styled JSX and ensured the page was highly performant and responsive.

March 2021

myStash Technologies, Remote (Nigeria) - Frontend Engineer (Intern)

- I worked on the landing page built with React.
- I worked on building the newsletter integration with mailChimp and Netlify serverless functions.
- Built a paystack recurring charge service demo
- Used firebase to build a fully functional fintech app.

Projects

Collection of beautiful frontend implementations (designs gotten from Frontendmentor.io) :

https://khrees2412.github.io/FM_tasks

TodoApp - An app that helps users keep track of tasks most important to them.

<https://github.com/khrees2412/react-todo-app>

- I built the app using ReactJs and Firebase.
- I implemented user authentication using Firebase Auth .
- I stored each user's data in a NoSQL database using Firebase Cloud Firestore.

Linktory - A full stack JavaScript project developed using the MERN stack that allows users to store URLs in the cloud, repo at <https://github.com/khrees2412/linktory>

- I implemented authentication using JWT in expressJS.
- User can add and delete URLs.
- User data safely secured in a cloud based MongoDB database.
